

Enhance overall efficiency of your converting machines with **BSTe Automation** solutions! FOR AS LOW AS ₹ 99,999/-**

The Challenge:

Are you facing problems with performance & accuracy due to tension measurement on your current converting machines, like MLS gravure press, slitting or lamination machine?

BST eltromat India- Automation Division is inviting you to share your automation-related issues and we provide you with the best possible solution!

The Solution:

If your automation panel has Siemens S7-1200 PLC and G120 Drives, our Automation Division **will only change the existing HMI** and install new software that will eliminate the application of Load Cells for tension measurement.

Ref. image of
Siemens
S7-1200 PLC

Your benefits at the glance:

- Tension will be accurate & stable during ramp-up, ramp-down and at during constant speeds.
- If load cells are not used, there are no breakdown issues because of the load cells.
- You don't have to measure & set the unwind roll diameter. The system will calculate it for you. No need for any additional dia-sensor.
- The HMI will be equipped with the Remote Access. This will facilitate the remote service at any time.
- The HMI is IOT compliant. It will send an email or SMS to a designated mail-id or mobile number in case of any trouble with the machine, alarm/fault. An internet connection is required for this facility.
- Roll report will be generated and will be emailed to a designated mail id with all-important production information.

All this and more for just ₹ 99,999/- Please get in touch with our Automation Division for more details and offers.

Perfecting your performance:

BST eltromat will take care of all services, from the planning, conceptualization, and consulting, to the development and implementation of all system components (including the operating concept), to the start-up procedure, function and safety tests, and optimization.
